

CTruk AVENGER

CTruk Avenger is an amphibious rescue and survey vehicle that can be carried on and launched from a CTruk 20T MPC or other mother ship.

Capable of carrying four passengers, this vehicle was designed to access the shallow waters and sand banks that render offshore wind turbines inaccessible to other support vessels at low tide.

The Avenger operates independently as a boat and can be deployed swiftly into the water in seas of up to one metre via a bespoke ramp system. Support and rescue access is excellent whether in deep or shallow water or over land. Being carried by and launched from a mother ship, there is no limit to Avenger's geographical range (the craft can operate up to three miles from the mother vessel).

Following its success in the offshore wind market, this amphibious craft has additional applications in disaster recovery, deploying easily from a mother vessel to reach stricken coastal areas following a natural disaster, or accessing communities cut off by floodwater to deliver aid and supplies. Security patrol of normally inaccessible areas is another role that the versatile Avenger can easily fill.

Main Particulars

- Length overall: 4.85m
- Beam overall: 2.65m
- Draft: 0.7m
- Lightship: 0.8 tonnes
- Pax: 4
- Speed land: 20mph
- Speed water: 6mph

Classification

- MCA Certified Rescue Vessel
within 3 miles of mother vessel (24 hrs)

Propulsion

- Marine: 25 hp Yamaha
- Land: 26 hp Kohler

Other Equipment

- Automatic / manual self righting system
- Roll cage
- AIS class A
- GPS
- Stretcher with rescue package
- Flares
- Spotlights (directional)
- Navigation lights
- Horn
- VHF
- Medical kit
- Emergency retrieval frame
- Windfarm specific bow fendering
- Stretcher cradle
- Automatic / manual bilge pumps
- Fire extinguishers
- High-visibility colour scheme
